

AMBERTEC

Permeability Profiler

The **Ambertec Permeability Profiler** is the most advanced system for analysing local permeability variations in sheet- and web materials as paper and board, tissue, non-woven, textiles, etc.

- ✦ **Visualize local (small scale) porosity (permeability) variations**
- ✦ **Obtain new understanding in printability and print quality**
- ✦ **Study quality of paper surface, coating or barrier layers**
- ✦ **Estimate void/defect rate**
- ✦ **Find correlations to porosity and sorption potential**
