

AMBERTEC

Permeability Analyzer

*The **Ambertec Permeability Analyzer** is the most advanced system for measuring characteristics of local permeability variations in all sheet and web materials such as paper and board, tissue, non-woven, textile, etc.*

- ✦ **Know two-sidedness of porosity (permeability) variations**
- ✦ **Obtain new understanding in printability and print quality**
- ✦ **Study quality of surface, coating or barrier layers**
- ✦ **Estimate void/defect rate**
- ✦ **Get profile of absorption and permeability two-sidedness**
- ✦ **Find correlations to porosity and sorption potential**
